

IN THE CLAIMS:

Please amend claims 1, 5, 10 and 14 as follows:

LISTING OF CURRENT CLAIMS

Claim 1. (Currently Amended) An apparatus for radio frequency identification, comprising:

a supporter comprising a slot; and

a data card comprising a memory chip, said data card for storing data, said data card receivable into said slot, said data card connected to an antenna wherein said antenna comprises ~~a printed circuit board~~ or a coiled enameled wire.

Claim 2. (Previously Amended) An apparatus for radio frequency identification according to claim 1, wherein said supporter is selected from the group consisting of MP3, mobile, watch, and belt.

Claim 3. (Previously Amended) An apparatus for radio frequency identification according to claim 1, wherein said memory chip comprises a plurality of components comprising a diode and a capacitor.

Claim 4. (Cancelled)

Claim 5. (Currently Amended) An apparatus for radio frequency identification, comprising:

a supporter comprising a plurality of slots, said supporter internally connected to an antenna, said antenna for connecting to a memory chip wherein said antenna comprises ~~a printed circuit board~~ or a coiled enameled wire; and

a memory chip for storing data, said memory chip being plugged into a slot, said memory chip electronically connected to said antenna by a contact on a surface of said memory chip.

Claim 6. (Previously Amended) An apparatus for radio frequency identification according to claim 5, further comprising a second slot for directly connecting to a data card having an antenna.

Claim 7. (Previously Amended) An apparatus for radio frequency identification according to claim 5, wherein said supporter is selected from the group consisting of MP3, mobile, and belt.

Claim 8. (Previously Amended) An apparatus for radio frequency identification according to claim 5, wherein said memory chip comprises a plurality of components comprising a diode and a capacitor.

Claim 9. (Cancelled)

Claim 10. (Currently Amended) An apparatus for radio frequency identification, comprising:

a supporter comprising a memory chip, said memory chip for storing data, said supporter comprising an antenna which is to obtain induced voltage wherein said antenna comprises ~~a printed circuit board or~~ a coiled enameled wire.

Claim 11. (Previously Amended) An apparatus for radio frequency identification according to claim 10, wherein said supporter is selected from the group consisting of MP3, mobile, and belt.

Claim 12. (Previously Amended) An apparatus for radio frequency identification according to claim 10, wherein said memory chip comprises a plurality of components comprising a diode and a capacitor.

Claim 13. (Cancelled)

Claim 14. (Previously Amended) An apparatus for radio frequency identification, comprising:

a supporter comprising a shell, wherein a memory chip and an antenna are inside said shell wherein said antenna comprises ~~a printed circuit board~~ or a coiled enameled wire.

Claim 15. (Previously Amended) An apparatus for radio frequency identification according to claim 14, wherein said supporter is selected from the group consisting of MP3, mobile, and belt.

Claim 16. (Previously Amended) An apparatus for radio frequency identification according to claim 14, wherein said memory chip comprises a plurality of components comprising a diode and a capacitor.

Claim 17. (Cancelled)

Claim 18. (Previously Amended) An apparatus for radio frequency identification, comprising:

a supporter comprising a shell, a memory chip and an antenna, wherein said memory chip and said antenna are adhering tags adhered to said shell wherein said adhering tag is a soft circuit board and is coated with an adhering material on a surface of said adhering tag.

Claim 19. (Previously Amended) An apparatus for radio frequency identification according to claim 18, wherein said supporter is selected from the group consisting of MP3, mobile, and belt.

Claim 20. (Previously Amended) An apparatus for radio frequency identification according to claim 18, wherein said memory chip comprises a plurality of components comprising a diode and a capacitor.

Claim 21. (Previously Amended) An apparatus for radio frequency identification according to claim 18, wherein said antenna comprises a printed circuit board or a coiled enameled wire.

Claim 22. (Cancelled)
